

MADE IN THE USA

Lightning Master components and systems are designed, sourced and manufactured by company employees in our facility in Clearwater, Florida, USA. It is important to us that every possible component and assembly be Made in America.

We aim to source all material locally, but we must note and let you know that some components, particularly those comprising surge suppression and electronic equipment, are no longer manufactured domestically. In that case, we preferentially source parts from countries that are aligned with American values. In many cases, this entails higher costs, but we see great value in keeping our business and, as a result, your business, “in the family”. By and large, all other raw materials and components are acquired domestically and completed here in our Clearwater facility.

Should you have any questions or concerns about any specific components, please let us know and we will provide clarification.

Also, should you find yourself in the Tampa area, please let us know and we will extend an invitation to visit our facility so you can see for yourself.
